## JupyterHub for DL

Student's Guide 2020

## What's this?

Web-based system for interactive deep learning development

## BETA

### What you get

- 1. 2 vCPU (Skylake)
- 2. 13GB usable system RAM
- 3. V100 GPU with 8GB VRAM
- 4. 50GB home storage
- 5. Scratch storage (mounted at ~/scratch)
- 6. Shared dataset storage (mounted at ~/datasets)

## Supported tools

### Preconfigured Tools and Frameworks

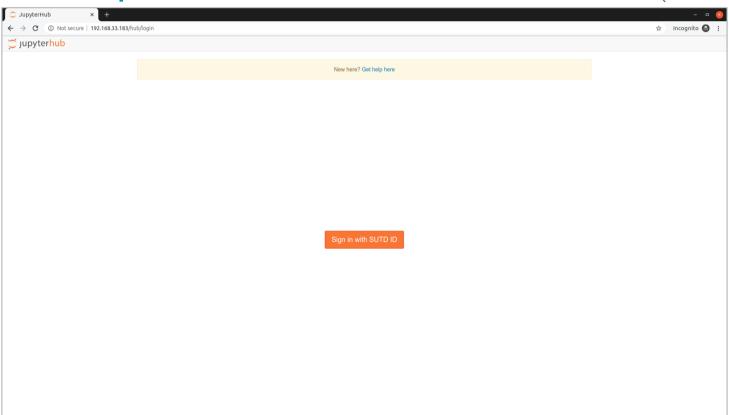

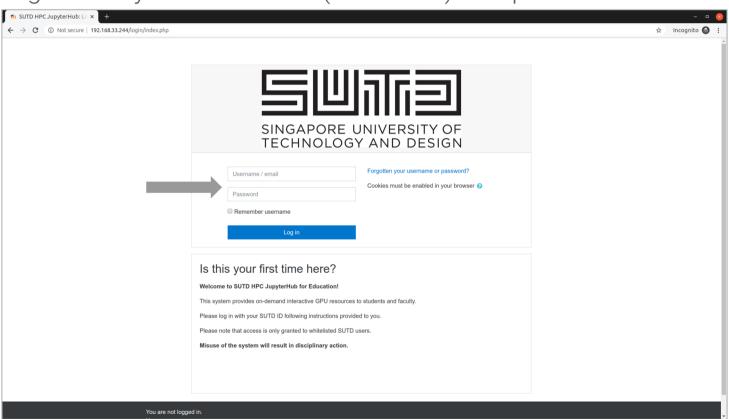

NVIDIA CUDA + CUDNN

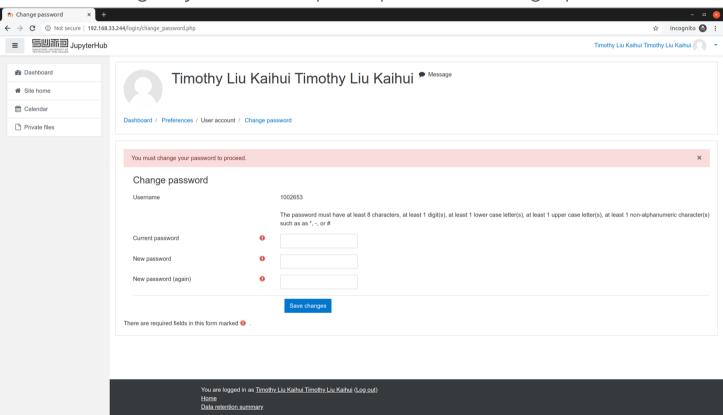

1. Go to <a href="http://192.168.33.183/">http://192.168.33.183/</a> via SUTD Network (or VPN)

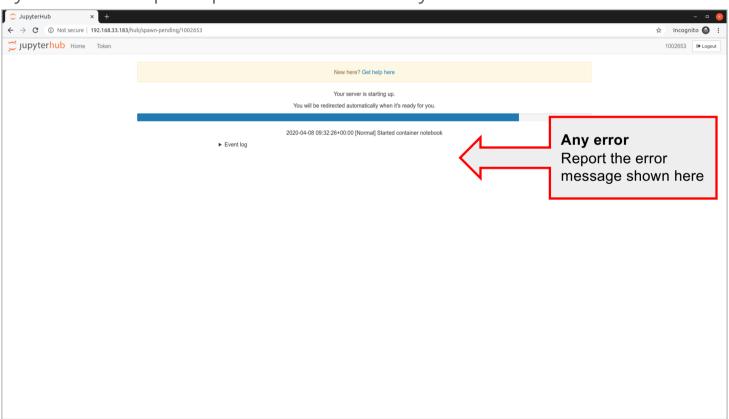

2. Log in with your student ID (100XXXX) and password dlcourse2020

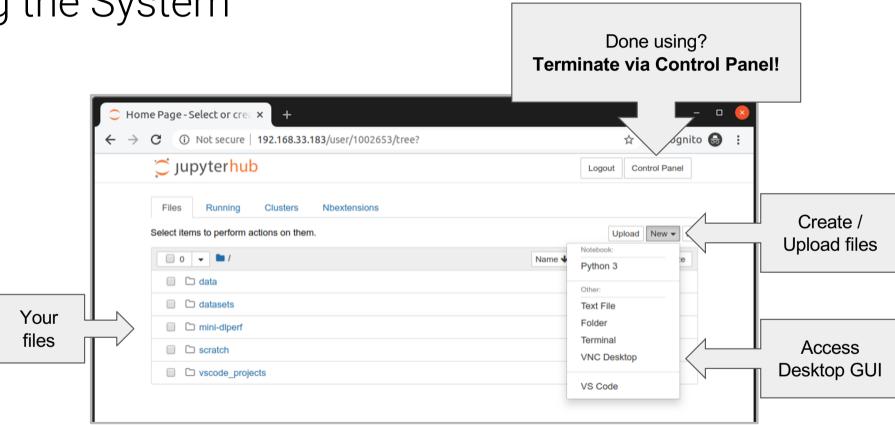

3. First time login: you will be prompted to change password

4. System will spin up an instance for you on the GPU servers

## Using the System

# Using the System

### BETA

### Usage Guidelines

- Most packages (eg. PyTorch, scikit-learn, OpenCV etc.) are already pre-installed and will use the GPU.
- Please terminate your instance after using.
  - Idle instances (no user interaction) will be terminated after 1 hour
- Use scratch storage for large file storage (e.g. weights, custom datasets)
- Watch your system RAM usage...
- System files are not persistent. If you modify system files, they will be reset.
  Only your home/scratch folders are preserved across sessions.
- Any misuse will result in disciplinary action.
  E.g. mine bitcoin, attempts to break the system etc

## Helpdesk

All questions, technical issues etc:

Ask on Telegram group (<a href="https://t.me/d12020helpdesk">https://t.me/d12020helpdesk</a>)

Questions asked elsewhere will not be entertained.
